## CAREER OBJECTIVE

Motivated BCA final-year student and self-taught DevOps practitioner with hands-on experience in Linux administration, AWS cloud infrastructure, Docker containerization, CI/CD automation, and Bash scripting. Seeking a DevOps Engineer Internship at Fineshift (Baner, Pune) to assist in managing CI/CD pipelines, support cloud infrastructure and server management, work on Linux systems, monitor applications, and collaborate with development teams on automation tasks.

## TECHNICAL SKILLS

|                  |                                                                                                  |
|------------------|--------------------------------------------------------------------------------------------------|
| Linux & Shell    | Ubuntu, Bash scripting, user/group management, file permissions, SSH, cron jobs, process control |
| Cloud – AWS      | EC2, IAM (users/roles/policies/MFA), S3, VPC, Security Groups, CloudWatch, AWS CLI               |
| Containers       | Docker, Docker Compose, Nginx, Apache, image build/tag/push, container lifecycle management      |
| CI/CD            | GitHub Actions (workflows, triggers, secrets), Jenkins (freestyle & declarative pipelines)       |
| IaC / Automation | Terraform (EC2/S3 provisioning), Ansible (playbooks, inventory, ad-hoc commands)                 |
| Dev & Tools      | Git, GitHub (branching, PRs, merge strategies), Python (scripting basics), VS Code               |

## PROJECTS

### CI/CD Pipeline Automation – AWS Deployment

*GitHub Actions | Jenkins | Docker | AWS EC2 | Docker Hub*

- Designed and implemented an end-to-end CI/CD pipeline using GitHub Actions and Jenkins that automatically builds, tests, and deploys the application on every Git push — directly supporting Fineshift's requirement to manage CI/CD pipelines and deployment processes.
- Integrated Docker image builds into the pipeline, pushed versioned images to Docker Hub, and deployed them to AWS EC2 instances automatically — eliminating all manual release steps and improving deployment speed.
- Configured multi-stage jobs with dev/prod environment-specific deployments, managed secrets via GitHub Actions variables, and monitored pipeline health through build logs and status notifications.

### AWS Cloud Infrastructure & Server Management

*AWS EC2 | IAM | VPC | CloudWatch | Nginx | Linux*

- Provisioned and managed AWS EC2 servers end-to-end: launched instances, configured VPC with subnets and route tables, applied security group rules, and performed SSH-based remote server administration — aligned with Fineshift's cloud infrastructure and server management activities.
- Deployed and configured Nginx as a web/reverse-proxy server on Linux, managed server processes, and troubleshooted connectivity and configuration issues — simulating real-world application support and deployment tasks.
- Created AWS CloudWatch dashboards and threshold-based CPU/memory/network alarms to monitor application health proactively and resolve incidents fast — covering Fineshift's requirement to monitor applications and troubleshoot issues.

### Linux User & Access Management Lab

*Linux | Bash | RBAC | IAM Concepts | Networking | Security*

- Simulated an enterprise access management environment: provisioned 10+ users and groups, enforced least-privilege sudo rules, configured password aging via `/etc/login.defs`, set up SSH access controls, and practised basic networking (DNS, iptables) — covering Fineshift's Linux systems and networking requirement.
- Developed Bash automation scripts for bulk user provisioning, SSH key injection, directory permission enforcement, and audit log generation — reducing manual admin effort and directly supporting the automation tasks expected in the role.
- Applied RBAC principles by mapping job roles (dev/ops/admin) to Linux groups with scoped directory access; practised IAM concepts including authentication, authorization, and access governance as used in real DevOps environments.

## EDUCATION

### Bachelor of Computer Applications (BCA)

*Expected June 2026*

*Dr. Babasaheb Ambedkar College, Aundh, Pune – Savitribai Phule Pune University*

## CERTIFICATIONS & LEARNING

- AWS Certified Cloud Practitioner – In Progress
- Docker & Containerization | Linux Fundamentals | Git & GitHub for DevOps – Completed (self-paced hands-on labs)
